

Audioengine W1 (AW1) Premium Wireless Audio Adapter for your Sonawall powered music system.

**Play all your music wirelessly** - from your Computer-TV-iPhone-iPad-iPod-iPad to your Sonawall SonaStudio 2.1 – SonaGo 2.1 – SonaRockboxx 2.1 - SonaTheater SA-100 powered subwoofer. AW1 provides CD-quality HD stereo sound with no reduction in audio quality.

**Functional Overview** The Audioengine W1 is designed to connect your Sonawall powered speakers wirelessly.

Think of AW1 as a simple replacement for any RCA or 3.5" mini-jack cable to or from your iPod or computer or TV or any other product where you want to eliminate audio cables.

The AW1 consists of 2 parts, the "Sender" and "Receiver":

**The Sender** transmits audio from your computer/iPod etc, through USB audio or from any product with 3.5mm mini-jack or RCA audio outputs.

**The other side of AW1, the Receiver,** connects audio to Sonawall powered sound systems with mini-jack or RCA audio connectors. Power for the Sender and Receiver is provided from either a USB computer port, from the included USB AC power adapter, or from any other USB AC charger.

**Unwire your music** Hear all your music - no dropouts, static, or noise. Some pretty clever engineering means your music remains free from interference from wireless routers, cordless and mobile phones, microwave ovens, Bluetooth and WiFi devices. Wireless that works.

**Easy setup** Most wireless audio products are difficult to use because they require you to download and install software, set up a network, and often require you to manually try to find a clear audio channel. The AW1 is plug-and-play so no software installation is needed - just connect both dongles to USB power (or to a USB battery pack), connect the audio cables, and wait 2 to 3 seconds for the status lights to go solid. Two stereo mini cables and an RCA adapter cable are included for easy connection to your Sonawall powered sound system.

#### **Audioengine W2 (AW2) Premium Wireless Adapter for iPod –**

Send music wirelessly from your iPod to your Sonawall powered music system. AW2 provides CD quality stereo sound with no reduction in audio quality. Unwire your iPod with the Ultimate Wireless Adapter!

**Easy Setup** Plug the digital Sender into your iPod and connect the included receiver to your Sonawall powered music system and you'll have complete control of your music from your iPod.

No need to learn how to work a separate remote and the AW2 is super-easy to hook up, with no batteries needed. And since you control everything right from your iPod you'll never have to lose another remote in the couch or go to a base station to change volume or songs.

**Why buy a dock?** Think of the Audioengine W2 as the "dockless dock". With a rock-solid wireless connection that beats Bluetooth, FM, and even other 2.4MHz systems, the AW2 is pre-configured out of the box so there are no buttons to push and no software to configure. Your iPod and all its controls are right there with you. The AW2 Receiver is unobtrusive and easily fits on the back of your Sonawall powered stereo system so you can finally get rid of that clunky dock.

**Hear the Difference** The Audioengine W2 sets a new level of quality and ease-of-use for wireless audio. Even if you're not an audio enthusiast, we guarantee you will still hear a difference!
